3 Introduction

The following document details the Module Interface Specifications for [Fill in your project name and description —SS]

Complementary documents include the System Requirement Specifications and Module Guide. The full documentation and implementation can be found at ... [provide the url for your repo —SS]

4 Notation

[You should describe your notation. You can use what is below as a starting point. —SS]

The structure of the MIS for modules comes from ?, with the addition that template modules have been adapted from ?. The mathematical notation comes from Chapter 3 of ?. For instance, the symbol $:=$ is used for a multiple assignment statement and conditional rules follow the form $(c_1 \Rightarrow r_1 | c_2 \Rightarrow r_2 | \dots | c_n \Rightarrow r_n)$.

The following table summarizes the primitive data types used by the Image Feature Correspondences for Camera Calibration software.

Data Type	Notation	Description
character	char	a single symbol or digit
string	str	a sequence of characters
boolean	\mathbb{F}_2	a number in the binary field, where all elements are $\{0,1\}$
integer	\mathbb{Z}	a number without a fractional component in $(-\infty, \infty)$
natural number	\mathbb{N}	a number without a fractional component in $[1, \infty)$
real	\mathbb{R}	any number in $(-\infty, \infty)$

The specification of Image Feature Correspondences for Camera Calibration uses some derived data types: sequences, strings, and tuples. Sequences are lists filled with elements of the same data type. Strings are sequences of characters. Tuples contain a list of values, potentially of different types. In addition, Image Feature Correspondences for Camera Calibration uses functions, which are defined by the data types of their inputs and outputs. Local functions are described by giving their type signature followed by their specification.

5 Module Decomposition

The following table is taken directly from the Module Guide document for this project.

Level 1	Level 2
Hardware-Hiding	
Behaviour-Hiding	Input Parameters Input Format Module Specification Parameters Output Format Module Output Verification Module Control Module Image Smoothing Module Keypoint Detection Module Feature Descriptor Module Feature Matching Module
Software Decision	Sequence Data Structure Image Data Structure Module Image Plot Module Feature Match Data Module Dataframe Structure Module ORB Data Structure Module

Table 1: Module Hierarchy

6 MIS of Input Format Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use \LaTeX for hyperlinks to external documents. —SS]

6.1 Module

config

6.2 Uses

- specParams (Section 7)

6.3 Syntax

6.3.1 Exported Constants

6.3.2 Exported Access Programs

Name	In	Out	Exceptions
get_head_directory	-	head_path as string	noHeadFound
get_active_functions	-	tuple (user-methods)	-
get_chosen_parameters	-	tuple (user-params)	-
check_limits	tuple (user-params)	-	badKernelSize, badStdDeviation, badFASTThreshold, badBinSize, badPatchSize

6.4 Semantics

6.4.1 State Variables

- kernel_sz $\in \mathbb{Z}$
- std_deviation $\in \mathbb{R}$
- FAST_threshold $\in \mathbb{Z}$
- bin_sz $\in \mathbb{Z}$
- patch_sz $\in \mathbb{Z}$
- mthd_img_smoothing $\in \mathbb{Z}$
- mthd_kp_detection $\in \mathbb{Z}$

- `mthd_kp_description` $\in \mathbb{Z}$
- `mthd_ft_match` $\in \mathbb{Z}$

tuple of methods and parameters goes here.

set the state as the defaults,

then set the state as the user defined methods, if available

[Not all modules will have state variables. State variables give the module a memory. —SS]

6.4.2 Environment Variables

- `head_path` as string

6.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

6.4.4 Access Routine Semantics

[`accessProg` —SS]():

- transition: [if appropriate —SS]
- output: [if appropriate —SS]
- exception: none

`get_head_directory()`:

- output: `head_path = Path(os.getcwd())` where `head_path` is a string

`get_active_functions()`:

- output: [`mthd_img_smoothing`, `mthd_kp_detection`, `mthd_kp_description`, `mthd_ft_match`]
=

`get_chosen_parameters()`:

- output:

`check_limits()`:

- output: none
- exception: `exc:=`

$\neg(kernel_sz < 1)$	\Rightarrow badKernelSize
$\neg(kernel_sz > 15)$	\Rightarrow badKernelSize
$\neg(kernel_sz \% 2 \neq 0)$	\Rightarrow badKernelSize
$\neg(0 < std_deviation < 10)$	\Rightarrow badStdDeviation
$\neg(2 \leq FAST_threshold \leq 255)$	\Rightarrow badFASTThreshold
$\neg(1 \leq FAST_threshold \leq 2048)$	\Rightarrow badBinSize
$\neg(5 \leq FAST_threshold \leq 100)$	\Rightarrow badPatchSize

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

7 MIS of Specification Parameters Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use \LaTeX for hyperlinks to external documents. —SS]

7.1 Module

specParams (Section 6)

7.2 Uses

None.

7.3 Syntax

7.3.1 Exported Constants

- $kernel_sz := 5$
- $std_deviation := 1$
- $FAST_threshold := 15$
- $bin_sz := 2000$
- $patch_sz := 31$
- $mthd_img_smoothing := 1$
- $mthd_kp_detection := 1$

- $mthd_kp_description := 1$
- $mthd_ft_match := 1$

7.3.2 Exported Access Programs

Name	In	Out	Exceptions
get_default_parameters	-	$kernel_sz : \mathbb{Z}$ $std_deviation : \mathbb{R}$ $FAST_threshold : \mathbb{Z}$ $bin_sz : \mathbb{Z}$ $patch_sz : \mathbb{Z}$	-
get_default_methods	-	$mthd_img_smoothing : \mathbb{Z}$ $mthd_kp_detection : \mathbb{Z}$ $mthd_kp_description : \mathbb{Z}$ $mthd_ft_match : \mathbb{Z}$	-

7.4 Semantics

7.4.1 State Variables

$kernel_sz : \mathbb{Z}$
 $std_deviation : \mathbb{R}$
 $FAST_threshold : \mathbb{R}$
 $bin_sz : \mathbb{Z}$
 $patch_sz : \mathbb{Z}$
 $mthd_img_smoothing : \mathbb{Z}$
 $mthd_kp_detection : \mathbb{Z}$
 $mthd_kp_description : \mathbb{Z}$
 $mthd_ft_match : \mathbb{Z}$

7.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

7.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

7.4.4 Access Routine Semantics

get_default_parameters():

- output:
 - *kernel_sz* : \mathbb{Z}
 - *std_deviation* : \mathbb{R}
 - *FAST_threshold* : \mathbb{Z}
 - *bin_sz* : \mathbb{Z}
 - *patch_sz* : \mathbb{Z}

- exception: none

get_default_methods():

- output:
 - *mthd_img_smoothing* : \mathbb{Z}
 - *mthd_kp_detection* : \mathbb{Z}
 - *mthd_kp_description* : \mathbb{Z}
 - *mthd_ft_match* : \mathbb{Z}

- exception: none

7.4.5 Local Functions

None.

8 MIS of Output Format Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use L^AT_EX for hypperlinks to external documents. —SS]

8.1 Module

formatOutput

8.2 Uses

- `matchStruct` (Section 10)
- `dataframeStruct` (Section 19)

8.3 Syntax

8.3.1 Exported Constants

Not applicable.

8.3.2 Exported Access Programs

Name	In	Out	Exceptions
main	-	-	-

8.4 Semantics

8.4.1 State Variables

- `kernel_sz` $\in \mathbb{Z}$
- `std_deviation` $\in \mathbb{R}$
- `FAST_threshold` $\in \mathbb{Z}$
- `bin_sz` $\in \mathbb{Z}$
- `patch_sz` $\in \mathbb{Z}$
- `mthd_img_smoothing` $\in \mathbb{Z}$
- `mthd_kp_detection` $\in \mathbb{Z}$
- `mthd_kp_description` $\in \mathbb{Z}$
- `mthd_ft_match` $\in \mathbb{Z}$
- `img_obj_1`, `img_obj_2` $\in \mathbb{Z}^{m \times n}$

8.4.2 Environment Variables

- `head_dir` as str
- `path_input_img` as str
- `path_keypoints` as str

- path_descriptors as str
- path_feature_matches as str

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

8.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

8.4.4 Access Routine Semantics

main():

- transition: Modify the state of the Specification Parameters Module and the environment variables for the Image Plot Module and Output Format Module.

[head_dir as str] = get_head_directory()

[mthd_img_smoothing $\in \mathbb{Z}$, mthd_kp_detection $\in \mathbb{Z}$, mthd_kp_descriptors $\in \mathbb{Z}$, mthd_ft_matching $\in \mathbb{Z}$] = get_chosen_methods()

[kern_sz $\in \mathbb{Z}$, std_deviation $\in \mathbb{R}$, FAST_threshold $\in \mathbb{Z}$, bin_sz $\in \mathbb{Z}$, patch_sz $\in \mathbb{Z}$] = get_chosen_parameters()

Smooth the image as a preprocessing step to keypoint detection

img_obj_1 = smooth_image(img_obj_1 $\in \mathbb{Z}^{m \times n}$, kernel_sz $\in \mathbb{Z}$, std_deviation $\in \mathbb{R}$)

Identify the keypoints. Note that if the methods for keypoint detection and descriptors are both == 1, then ORB is the selected method, and the keypoint and descriptor modules should use the same ORB object, which likely will come from the OpenCV library

Assign descriptors to keypoints

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

8.4.5 Local Functions

[As appropriate —SS] [These functions are for the purpose of specification. They are not necessarily something that is going to be implemented explicitly. Even if they are implemented, they are not exported; they only have local scope. —SS]

9 MIS of Output Verification Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use \LaTeX for hyperlinks to external documents. —SS]

9.1 Module

verifyOutput

9.2 Uses

None.

9.3 Syntax

9.3.1 Exported Constants

9.3.2 Exported Access Programs

Name	In	Out	Exceptions
[accessProg —SS]	-	-	-

9.4 Semantics

9.4.1 State Variables

[Not all modules will have state variables. State variables give the module a memory. —SS]

9.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

9.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

9.4.4 Access Routine Semantics

[accessProg —SS]():

- transition: [if appropriate —SS]
- output: [if appropriate —SS]
- exception: [if appropriate —SS]

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

9.4.5 Local Functions

[As appropriate —SS] [These functions are for the purpose of specification. They are not necessarily something that is going to be implemented explicitly. Even if they are implemented, they are not exported; they only have local scope. —SS]

10 MIS of Control Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use L^AT_EX for hyperlinks to external documents. —SS]

10.1 Module

main

10.2 Uses

- matchFeatures (Section 14)
- plotImage (Section 16)
- formatOutput (Section 8)
- verifyOutput (Section 9)

10.3 Syntax

10.3.1 Exported Constants

10.3.2 Exported Access Programs

Name	In	Out	Exceptions
main	-	-	-

10.4 Semantics

10.4.1 State Variables

[Not all modules will have state variables. State variables give the module a memory. —SS]

10.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

10.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

10.4.4 Access Routine Semantics

[accessProg —SS]():

- transition: [if appropriate —SS]
- output: [if appropriate —SS]
- exception: [if appropriate —SS]

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

10.4.5 Local Functions

[As appropriate —SS] [These functions are for the purpose of specification. They are not necessarily something that is going to be implemented explicitly. Even if they are implemented, they are not exported; they only have local scope. —SS]

11 MIS of Image Smoothing Module

[You can reference SRS labels, such as R??. —SS] [It is also possible to use \LaTeX for hyperlinks to external documents. —SS]

11.1 Module

smoothImage

11.2 Uses

- config (Section 10)
- imageStruct (Section 15)

11.3 Syntax

11.3.1 Exported Constants

None.

11.3.2 Exported Access Programs

Name	In	Out	Exceptions
smooth_image	noisy_img: $\mathbb{Z}^{H \times W}$, kernel_sz: \mathbb{Z} std_deviation: \mathbb{R}	smoothed_img: $\mathbb{Z}^{H \times W}$	-

11.4 Semantics

11.4.1 State Variables

- smoothed_img: $\mathbb{Z}^{H \times W}$

11.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

11.4.3 Assumptions

- Exceptions on input limits are handled in specParams module.

11.4.4 Access Routine Semantics

smooth_image($c \in \mathbb{Z}^{H \times W}$, kernel_sz $\in \mathbb{Z}$, std_deviation $\in \mathbb{R}$):
if method == 1, perform Gaussian Blur with OpenCV
img_blur = GaussianBlur(noisy_img, kernel_sz, std_deviation)

- output: img_blur $\in \mathbb{Z}^{m \times n}$
- exception: None

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

12 MIS of Keypoint Detection Module

[You can reference SRS labels, such as R??. —SS] [It is also possible to use \LaTeX for hyperlinks to external documents. —SS]

12.1 Module

detectKeypoints

12.2 Uses

- config (Section 6)
- smoothImage (Section 11)
- imageStruct (Section 15)
- orbStruct (Section 17)

12.3 Syntax

12.3.1 Exported Constants

12.3.2 Exported Access Programs

Name	In	Out	Exceptions
detectKeypoints	methd_kp_detection $\in \mathbb{Z}$, img $\in \mathbb{Z}^{m \times n}$	keypoints as TBD	-

12.4 Semantics

12.4.1 State Variables

- orb_object as TBD

12.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

12.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

12.4.4 Access Routine Semantics

detectKeypoints(mthd_kp_detection $\in \mathbb{Z}$, img $\in \mathbb{Z}^{m \times n}$):

- transition: Generate instance of of the detector object

if mthd_kp_detection == 1

orb_object = ORB.create(bin_sz $\in \mathbb{Z}$, patch_sz $\in \mathbb{Z}$, FAST_threshold $\in \mathbb{Z}$)

orb_object.detect(img $\in \mathbb{Z}^{m \times n}$)

- output: Returns the set of keypoints $K = \{(x_i, y_i, s_i, \theta_i, r_i) \mid i \in \mathbb{N}\}$, where:
 - $(x_i, y_i) \in \mathbb{R}^2$ (spatial coordinates)
 - $s_i \in \mathbb{R}^+$ (scale)
 - $\theta_i \in [0, 2\pi]$ (orientation)
 - $r_i \in \mathbb{R}$ (response strength)

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

13 MIS of Feature Descriptor Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use \LaTeX for hyperlinks to external documents. —SS]

13.1 Module

assignDescriptors

13.2 Uses

- detectKeypoints (Section 12)

13.3 Syntax

13.3.1 Exported Constants

13.3.2 Exported Access Programs

Name	In	Out	Exceptions
compute_descriptors	-	-	-

13.4 Semantics

13.4.1 State Variables

- orb_object as **TBD**

13.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

13.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

13.4.4 Access Routine Semantics

compute_descriptors(orb_obj as **TBD**, img $\in \mathbb{Z}^{m \times n}$, keypoints as keypoint ADT):
desc = orb_object.compute(img, keypoints)

- output: desc $\in \mathbb{F}_2^{256}$
- exception: [if appropriate —SS]

[accessProg —SS]():

- transition: [if appropriate —SS]

- output: [if appropriate —SS]
- exception: [if appropriate —SS]

13.4.5 Local Functions

[As appropriate —SS] [These functions are for the purpose of specification. They are not necessarily something that is going to be implemented explicitly. Even if they are implemented, they are not exported; they only have local scope. —SS]

14 MIS of Feature Matching Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use L^AT_EX for hyperlinks to external documents. —SS]

14.1 Module

matchFeatures

14.2 Uses

- assignDescriptors (Section 13)

14.3 Syntax

14.3.1 Exported Constants

14.3.2 Exported Access Programs

Name	In	Out	Exceptions
[accessProg —SS]	-	-	-

14.4 Semantics

14.4.1 State Variables

[Not all modules will have state variables. State variables give the module a memory. —SS]

14.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

14.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

14.4.4 Access Routine Semantics

[accessProg —SS]():

- transition: [if appropriate —SS]
- output: [if appropriate —SS]
- exception: [if appropriate —SS]

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

14.4.5 Local Functions

[As appropriate —SS] [These functions are for the purpose of specification. They are not necessarily something that is going to be implemented explicitly. Even if they are implemented, they are not exported; they only have local scope. —SS]

15 MIS of Image Data Structure Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use \LaTeX for hyperlinks to external documents. —SS]

15.1 Module

imageStruct

15.2 Uses

None.

15.3 Syntax

15.3.1 Exported Constants

15.3.2 Exported Access Programs

Name	In	Out	Exceptions
[accessProg —SS]	-	-	-

15.4 Semantics

15.4.1 State Variables

[Not all modules will have state variables. State variables give the module a memory. —SS]

15.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

15.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

15.4.4 Access Routine Semantics

[accessProg —SS]():

- transition: [if appropriate —SS]
- output: [if appropriate —SS]
- exception: [if appropriate —SS]

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

15.4.5 Local Functions

[As appropriate —SS] [These functions are for the purpose of specification. They are not necessarily something that is going to be implemented explicitly. Even if they are implemented, they are not exported; they only have local scope. —SS]

16 MIS of Image Plot Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use L^AT_EX for hypperlinks to external documents. —SS]

16.1 Module

plotImage

16.2 Uses

- imageStruct (Section 16)

16.3 Syntax

16.3.1 Exported Constants

16.3.2 Exported Access Programs

Name	In	Out	Exceptions
[accessProg —SS]	-	-	-

16.4 Semantics

16.4.1 State Variables

[Not all modules will have state variables. State variables give the module a memory. —SS]

16.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

16.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

16.4.4 Access Routine Semantics

[accessProg —SS]():

- transition: [if appropriate —SS]

- output: [if appropriate —SS]
- exception: [if appropriate —SS]

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

16.4.5 Local Functions

[As appropriate —SS] [These functions are for the purpose of specification. They are not necessarily something that is going to be implemented explicitly. Even if they are implemented, they are not exported; they only have local scope. —SS]

17 MIS of ORB Data Structure Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use L^AT_EX for hypperlinks to external documents. —SS]

17.1 Module

orbStruct

17.2 Uses

None.

17.3 Syntax

17.3.1 Exported Constants

None.

17.3.2 Exported Access Programs

Name	Input	Output	Exceptions
ORB.create	$\text{bin_sz} \in \mathbb{Z}$, $\text{patch_sz} \in \mathbb{Z}$, $\text{FAST_threshold} \in \mathbb{Z}$	orb_object	None
orb_object.detect	$\text{image} \in \mathbb{Z}^{h \times w}$	K (set of keypoints)	invalidImg
orb_object.compute	$\text{image} \in \mathbb{Z}^{h \times w}$, K where K is a set of keypoints	D (set of descriptors)	invalidImg, invalid- Keypoints

17.4 Semantics

17.4.1 State Variables

orb_object \in **TBD**

17.4.2 Environment Variables

None.

17.4.3 Assumptions

- The input image is a valid grayscale or color image.
- Keypoints are detected before computing descriptors.

17.4.4 Access Routine Semantics

GaussianBlur($\text{img} \in \mathbb{Z}^{m \times n}$, ($\text{kernel_sz} \in \mathbb{Z}$, $\text{kernel_sz} \in \mathbb{Z}$), $\text{std_deviation} \in \mathbb{R}$):

- Output: $\text{img_blur} \in \mathbb{Z}^{m \times n}$
- Exception: None. Exceptions are handled in Input Format Module.

ORB.create($\text{bin_sz} \in \mathbb{Z}$, $\text{patch_sz} \in \mathbb{Z}$, $\text{FAST_threshold} \in \mathbb{Z}$):

- Output: Initializes orb_object as **TBD**
- Exception: None. Exceptions are handled in Input Format Module.

orb_object.detect($\text{image} \in \mathbb{Z}^{m \times n}$):

- Output: Returns the set of keypoints $K = \{(x_i, y_i, s_i, \theta_i, r_i) \mid i \in \mathbb{N}\}$, where:
 - $(x_i, y_i) \in \mathbb{R}^2$ (spatial coordinates)
 - $s_i \in \mathbb{R}^+$ (scale)

- $\theta_i \in [0, 2\pi]$ (orientation)
- $r_i \in \mathbb{R}$ (response strength)

- Exception: `invalidImage`

`orb_object.compute(image, K):`

- Output: Returns a set of binary descriptors $D = \{d_i \mid d_i \in \mathbb{F}_2^{256}, i \in \mathbb{N}\}$.
- Exception:
 - image not found \Rightarrow `invalidImg`
 - keypoints not found \Rightarrow `invalidKeypoints`

18 MIS of Feature Match Data Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use \LaTeX for hyperlinks to external documents. —SS]

18.1 Module

`matchStruct`

18.2 Uses

None.

18.3 Syntax

18.3.1 Exported Constants

18.3.2 Exported Access Programs

Name	In	Out	Exceptions
BFMatcher	-	Initializes brute_force_object as TBD	None.
matchDescriptors	D_1 as descriptor type, D_2 as descriptor type	Returns a set of matches $M = \{m_i \mid m_i = (k_{1i}, k_{2i}, d_i), k_{1i} \in D_1, k_{2i} \in D_2, d_i \in \mathbb{R}^+\}$, where d_i is the match distance.	Raises an error if descriptors are invalid or empty.
sortMatches	M (set of matches)	Returns a sorted set of matches M' , where matches are sorted in ascending order of distance d_i .	Raises an error if the match set is empty.

18.4 Semantics

18.4.1 State Variables

- brute_force_object as **TBD**

18.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

18.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

- the brute_force_object is initialized before matching is called

18.4.4 Access Routine Semantics

BFMatcher():

- output: Initializes brute_force_object as **TBD**
- exception: None. Exceptions are handled in Input Format Module.

matchDescriptors(D_1 as descriptor type, D_2 as descriptor type):

- output: Returns a set of matches $M = \{m_i \mid i \in \mathbb{N}\}$, where each match m_i is defined as $m_i = (k_{1i}, k_{2i}, d_i)$ with $k_{1i} \in D_1$, $k_{2i} \in D_2$, and $d_i \in \mathbb{N}$, where d_i represents the match distance.
- exception: Raises an error if the descriptors are invalid or empty.

sortMatches(M):

- output: Returns a sorted set of matches M' , where matches are sorted in ascending order of distance d_i .
- exception: Raises an error if the match set is empty.

19 MIS of Dataframe Structure Module

[Use labels for cross-referencing —SS]

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use L^AT_EX for hyperlinks to external documents. —SS]

19.1 Module

dataframeStruct

19.2 Uses

None.

19.3 Syntax

19.3.1 Exported Constants

19.3.2 Exported Access Programs

Name	In	Out	Exceptions
[accessProg —SS]	-	-	-

19.4 Semantics

19.4.1 State Variables

[Not all modules will have state variables. State variables give the module a memory. —SS]

19.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

19.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

19.4.4 Access Routine Semantics

[accessProg —SS]():

- transition: [if appropriate —SS]
- output: [if appropriate —SS]
- exception: [if appropriate —SS]

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

20 MIS of [Module Name —SS]

[Use labels for cross-referencing —SS]

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use L^AT_EX for hyperlinks to external documents. —SS]

20.1 Module

[Short name for the module —SS]

20.2 Uses

20.3 Syntax

20.3.1 Exported Constants

20.3.2 Exported Access Programs

Name	In	Out	Exceptions
[accessProg —SS]	-	-	-

20.4 Semantics

20.4.1 State Variables

[Not all modules will have state variables. State variables give the module a memory. —SS]

20.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

20.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

20.4.4 Access Routine Semantics

[accessProg —SS]():

- transition: [if appropriate —SS]
- output: [if appropriate —SS]
- exception: [if appropriate —SS]

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

20.4.5 Local Functions

[As appropriate —SS] [These functions are for the purpose of specification. They are not necessarily something that is going to be implemented explicitly. Even if they are implemented, they are not exported; they only have local scope. —SS]

21 Appendix

[Extra information if required —SS]
